CLAIMS

1. (Currently Amended) A decorative or shiny coating for <u>deposit directly on</u> an article, said coating comprising:

a first <u>leveling</u> layer comprised of polymeric material <u>deposited directly</u> on at least a portion of the surface of said article <u>to provide a leveling effect thereto</u>, <u>said article formed from plastic</u>, ceramic, or metal; and

a second <u>decorative</u> layer comprised of a compound selected from the group consisting of zirconium compound, titanium compound or zirconium/titanium alloy compound on said first <u>leveling</u> layer.

- 45. (Currently Amended) The coating of claim 1 wherein said first <u>leveling</u> layer of polymeric material is selected from the group consisting of polycarbonate, polyester, polymethacrylate, polystyrene, acrylonitrile-butadiene-styrene, styrene-acrylonitrile, alkyd resin, polyethylene, and blends and copolymers thereof.
- 46. (Previously Added) The coating of claim 1 wherein said compound is selected from the group consisting of a nitride, an oxide, a carbide, or a carbonitride of zirconium, titanium or zirconium/titanium alloy.
- 47. (Currently Amended) The coating of claim 1 further comprising a third <u>protective</u> layer comprised of a polymeric material selected from the group consisting of polyurethane, polyacrylate or polymethacrylate on said second <u>decorative</u> layer.
- 48. (Currently Amended) A decorative or shiny coating for <u>deposit directly on</u> an article, said coating comprising:

a first <u>leveling</u> layer comprised of polymeric material <u>deposited directly</u> on at least a portion of the surface of said article <u>to provide a leveling effect thereto</u>, <u>said article formed from plastic</u>, <u>ceramic</u>, or metal;

a second <u>adhesion promoting</u> layer selected from the group consisting of zirconium, titanium or zirconium/titanium alloy on said first <u>leveling</u> layer; and

a third <u>decorative</u> layer comprised of a compound selected from the group consisting of zirconium compound, titanium compound or zirconium/titanium alloy compound on said second <u>adhesion promoting</u> layer.

- 49. (Currently Amended) The coating of claim 48 wherein said first <u>leveling</u> layer of polymeric material is selected from the group consisting of polycarbonate, polyester, polymethacrylate, polystyrene, acrylonitrile-butadiene-styrene, styrene-acrylonitrile, alkyd resin, polyethylene, and blends and copolymers thereof.
- 50. (Previously Added) The coating of claim 48 wherein said compound is selected from the group consisting of a nitride, an oxide, a carbide, or a carbonitride of zirconium, titanium or zirconium/titanium alloy.
- 51. (Currently Amended) The coating of claim 48 further comprising a fourth <u>protective</u> layer comprised of a polymeric material selected from the group consisting of polyurethane, polyacrylate or polymethacrylate on said third <u>decorative</u> layer.
- 52. (Currently Amended) A decorative or shiny coating for <u>deposit directly on</u> an article, said coating comprising:
- a first <u>leveling</u> layer comprised of polymeric material <u>deposited directly</u> on at least a portion of the surface of said article <u>to provide a leveling effect thereto</u>, <u>said article formed from plastic</u>, ceramic, or metal; and

- a <u>decorative</u> sandwich layer comprised of alternating layers of compounds selected from the group consisting of zirconium compound, titanium compound or zirconium/titanium alloy compound on said first <u>leveling</u> layer.
- 53. (Currently Amended) The coating of claim 52 wherein said first <u>leveling</u> layer of polymeric material is selected from the group consisting of polycarbonate, polyester, polymethacrylate, polystyrene, acrylonitrile-butadiene-styrene, styrene-acrylonitrile, alkyd resin, polyethylene, and blends and copolymers thereof.
- 54. (Previously Added) The coating of claim 52 wherein said compound is selected from the group consisting of a nitride, an oxide, a carbide, or a carbonitride of zirconium, titanium or zirconium/titanium alloy.
- 55. (Currently Amended) The coating of claim 54 wherein said <u>decorative</u> sandwich layer is comprised of alternating layers comprised of zirconium nitride and titanium nitride.
- 56. (Currently Amended) The coating of claim 52 further comprising a top <u>protective</u> layer comprised of a polymeric material selected from the group consisting of polyurethane, polyacrylate or polymethacrylate on said sandwich layer.
- 57. (Currently Amended) The coating of claim 52 further comprising an adhesion promoting layer selected from the group consisting of zirconium, titanium or zirconium/titanium alloy disposed intermediate said first <u>leveling</u> layer and said <u>decorative</u> sandwich layer.
- 58. (Currently Amended) A method for providing a decorative or shiny appearance to an article, said method comprising:

applying a first <u>leveling</u> layer comprised of a polymeric material <u>deposited directly</u> on at least a portion of the surface of said article <u>to provide a leveling effect thereto</u>, <u>said article</u> <u>formed from plastic</u>, <u>ceramic</u>, <u>or metal</u>; and

applying a second <u>decorative</u> layer comprised of a compound selected from the group consisting of zirconium compound, titanium compound or zirconium/titanium alloy compound on said first <u>leveling</u> layer.

- 59. (Currently Amended) The method of claim 58 further comprising the step of applying a third <u>protective</u> layer comprised of a polymeric material selected from the group consisting of polyurethane, polyacrylate or polymethacrylate on said second <u>decorative</u> layer.
- 60. (Currently Amended) A method for providing a decorative or shiny appearance to an article, said method comprising:

applying a first <u>leveling</u> layer comprised of a polymeric material <u>deposited directly</u> on at least a portion of the surface of said article <u>to provide a leveling effect thereto</u>, <u>said article</u> formed from plastic, ceramic, or metal;

applying a second layer comprised of zirconium, titanium or zirconium/titanium alloy on said first layer; and

applying a third layer comprised of a compound selected from the group consisting of zirconium compound, titanium compound or zirconium/titanium alloy compound on said second layer.

- 61. (Currently Amended) The method of claim 60 further comprising the step of applying a fourth <u>protective</u> layer comprised of a polymeric material selected from the group consisting of polyurethane, polyacrylate or polymethacrylate on said third layer.
- 62. (Currently Amended) A method for providing a decorative or shiny appearance to an article, said method comprising:

applying a first <u>leveling</u> layer comprised of a polymeric material <u>deposited directly</u> on at least a portion of the surface of said article <u>to provide a leveling effect thereto</u>, <u>said article</u> <u>formed from plastic</u>, ceramic, or metal; and

applying a <u>decorative</u> sandwich layer comprised of alternating layers of compounds selected from the group consisting of zirconium compound, titanium compound or zirconium/titanium alloy compound on said first layer.

63. (Currently Amended) The method of claim 62 further comprising the step of applying a protective layer comprised of a polymeric material selected from the group consisting of polyurethane, polyacrylate or polymethacrylate on said sandwich layer.
